

PROJECT DESCRIPTION

As the name data encryption involves encrypting data which means converting data into small and burst amount or to hide somewhere so that it can be used or read only after data decoding.

Pls click to know more about the [encryption](#) and [decryption](#).

THE code for data encryption required only .bmp format of image only ,the reason behind using only .bmp format of image is that other format of image are losseless type of format which means they loose data after saving.

To use code find instruction file.

A sample .bmp format image is also included
